

icom Connectivity Suite – VPN

Transparent Remote Access to Machines and Plants

VPN Services

icom Connectivity Suite

Top Benefit!

2 licences permanently free!

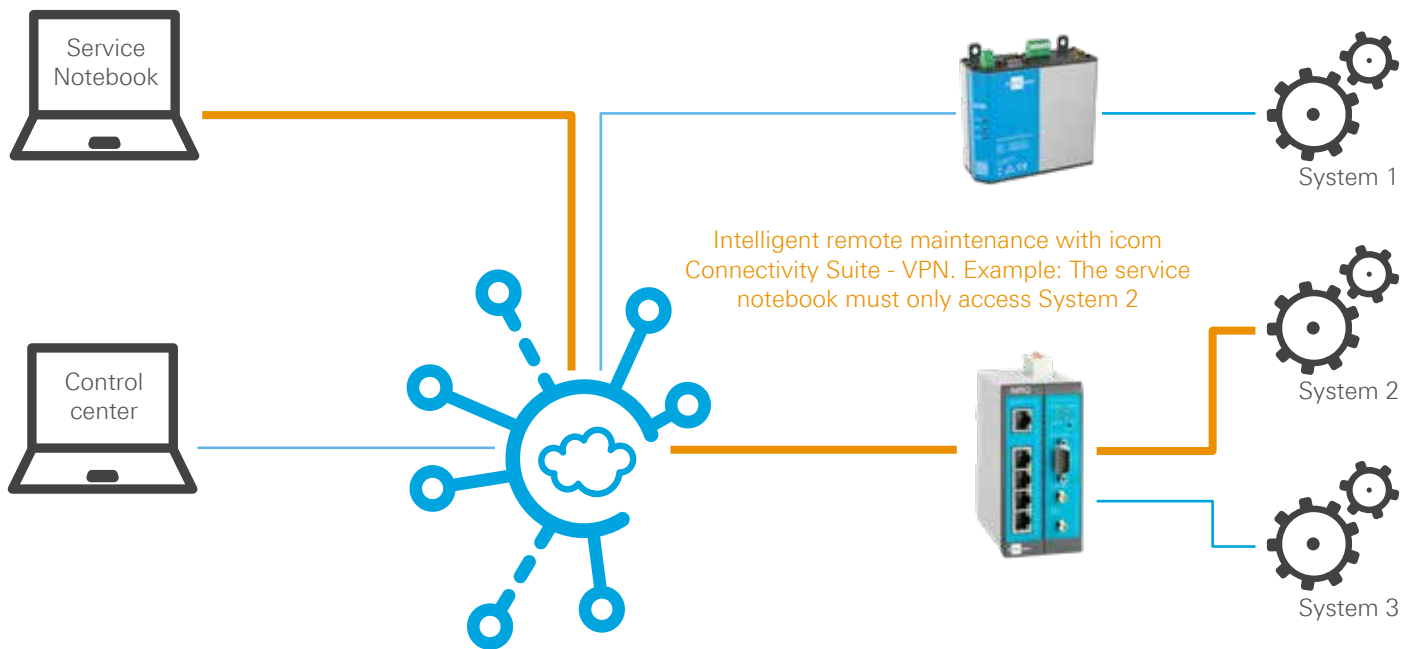

Unlimited number of devices, not bound to the purchase of further licences, all functions included.

Secure connections are the basis of modern data communication. The protection of field devices was no issue in times of SMS-based failure reporting. Industry 4.0 and the Internet of Things require that a multitude of devices are always online, communicate with each other and operate autonomously. This multi-directional communication in wider, growing networks must be protected and managed.

INSYS icom offers a managed service with the icom Connectivity Suite - VPN that provides communication for OpenVPN-capable routers, PCs and other devices in a secure VPN

environment. Integration and management of the devices is very simple: Configuration files and certificates are generated by the service and automatically uploaded to routers of INSYS icom thanks to their quick start wizard.

Group formation, connection control, network monitoring and Firewall-in-tunnel are just a few highlights that make the icom Connectivity Suite - VPN to much more than a simple VPN service. And now the best: You need neither your own infrastructure nor IT experts. Create your own VPN, quick and easy with INSYS icom.

Installation options:

As a Service

- VPN in 5 minutes
- Complete hosting in German, ISO 27001- certified data center by INSYS icom
- Highest availability
- All-round carefree package

OnPremise light
